Mezory Opened A New Branch In Dubai, U.A.E.

"It's A New Beginning." said Mr. Gus Naif the Operations Manager of Mezory LLC, a highly regarded American CCTV system provider, during the ceremony organized to launch the new branch in Dubai UAE.

"The new branch in Dubai Silicon Oasis will provide better business relationships with our partners and clients which will lead to performance increase, quality improvement, and fulfill designated business objectives." Continue Mr. Naif, who urged his employees to stay consistent and productive to create a unique company place and reputation as a superior provider of high quality CCTV products.

Mr. Naif proceed that "Mezory will continue to enhance its clients operations by providing a secure work environment. We will keep working outside our regular channels to source and develop most reliable, complete, and cost effective solutions and solve most challenging problems while maintaining standards."

Mr. Naif also told the audience that "Mezory is a dimensional company that produce wide varying spectrum of CCTV products to include Analog, HD-SDI, and IP. The company assures that each professional team member has the knowledge, qualifications, and experience needed to listen to and understand the client's needs, then provide the right solution."

Mezory CCTV Participation in Intersec 2015

Mezory CCTV will be one of the exhibitors in Dubai INTERSEC 2015 exhibition, which is the largest and most comprehensive exhibition and conference for security, safety and fire protection in the Middle East. Intersec 2015, 18-20 January, will be in Dubai, UAE.

Please visit us at booth number S2-E44 at the USA Pavilion.

UAE Spends \$8.6M on Airport Security.

UAE airport security spending has been estimated at Dh31.6

million (\$8.6 million) for 2014, accounting for 23 % of the total Middle East expenditure in the sector.

Mezory Enhanced HD-SDI Solution

Are you seeking HD resolution CCTV analogue solution? MEZORY HD-SDI solution makes it possible to transmit Full HD 1080P resolution through existing analog infrastructure. It has a significant real WDR performance at 30fps and supports 30p, 60p and 60i which can be adjusted by user selection.

Real WDR (30p with 100m Support)

A powerful and ultra-advanced Real WDR technology that captures cleaner and superior high resolution images even when a strong back light present.

- Real WDR 30p with 100m support
- 30p & 60p switchable from DSP
- Various setting parameters to provide unpredictable setting environments

Full High Definition

HD Cameras provides up to 5 times higher resolution compared to standard resolution cameras. Therefore, one HD camera can replace 3~4 standard cameras which can significantly reduce the total installation cost. In addition, the 16:9 wide screen formats provides much wider coverage than standard 4:3 cameras which makes it possible to cover wider areas with one HD camera.

Defog

Helps get the vivid image in harsh environment such as foggy or rainy weather.

Coming Soon: HD-SDI Product Line.

Mezory CCTV is proud to announce launching new product line to the market within Q1 2015.

The new product line technology is HD-SDI (high definition serial digital interface) which deliver high definition high quality analog video signal

Quote

"If you don't know where you are going, any road will get you there" - Lewis Carroll

Smart-IR

Allows the user to adjust in some applications where the close object is saturated and overexposed. This feature eliminates saturation of video image for the close object in dark condition by control of IR sensitivity.

3D-DNR

Prevents blurry image of moving objects and it activates only if moving objects are appearing in the scene.

Cameras In Specialty Applications

Think video surveillance cameras are used only for security applications? There are dozens of ways in which they're not. One of history's great twists of irony occurred in Wales in October 1913, when a disastrous mine explosion killed 439 miners. What was the source of the irony?

To help protect the miners, their employer had installed low-voltage signaling bells to improve communication and safety in the mines. But far from protecting the miners' safety, one of these bells produced a spark that touched off methane gas present in the mine, triggering the tragic blast.

Just as back then, technology today is utilized to track workers' safety procedures; new Security Systems Extreme CCTV cameras for harsh environments are engineered to contain explosions within their housing, meaning the cameras won't produce a spark that could ignite a potentially explosive environment.

Today's open architecture and convergence of solutions enable video surveillance systems to be integrated with other systems in a facility or enterprise.

In fact, the applications for video surveillance are unlimited and growing quickly outside security field. One of the most important applications is to protect workers in oil, gas and petrochemical facilities, both offshore and on shore. Any surveillance cameras in those environments are not for security, they're used for safety or process monitoring. Because these environments are very volatile, employees working in them need to be monitored to ensure they are safe.
